

**5G Rural Dorset**

## Innovation Accelerator 5G Test Range

Alongside the indoor network is an outdoor 5G range and testbed for evaluating 5G against 4G LTE, NB-IoT and other bearers 'in the wild' and away from the laboratory but on a secure site. The Innovation Park is large and secure so it is ideal for use by government and commercial organisations to test security and resilience solutions and demonstrate new technologies. Examples include evaluating 5G modem and network segmentation and exploring 5G applications in autonomous vehicles as well as augmented reality, autonomy, advanced manufacture, remote control robotics and live stream HD video.
